LinkedIn Profile

TECHNICAL SKILLS

Languages & Core

Java SQL C++ Visual Basic

Automation & Testing

Selenium Cucumber / BDD REST API Testing
Postman SOAPUI JMeter Spring Boot

AI & Emerging Tech

Agentic Programming Cursor Claude
Codex Antigravity

DevOps & Tools

GitHub Jenkins Maven JFrog Artifactory
Jira Confluence

Infrastructure & Data

MongoDB Kafka PCF IntelliJ IDEA

EDUCATION

B.Sc. Electronics Engineering

Instituto Tecnológico de Mérida

Mérida, Yucatán, México

2009 – 2014

LANGUAGES

Spanish Native

English Professional

METHODOLOGIES

Agile / Scrum Kanban BDD / TDD
Shift-Left Testing CI/CD Waterfall

PROFESSIONAL SUMMARY

Result-driven **Senior QA Automation Engineer & SDET** with **10+ years** of experience delivering high-quality software across **large-scale payment platforms and financial systems**. Proven track record in architecting robust BDD automation frameworks using Java, Cucumber, and Selenium, while integrating tests into CI/CD pipelines. Currently pioneering **AI-augmented quality engineering** workflows using **Cursor · Claude · Codex · Antigravity** to accelerate test development and defect prediction. Passionate about shifting quality left and driving engineering excellence across cross-functional teams.

KEY ACHIEVEMENTS

10+

Years of QA & Automation expertise across enterprise systems

US Visa

Active B1/B2 Tourist Visa, available for international travel

AI-First

Early adopter of agentic programming & AI-driven test generation

E2E

Full-stack test coverage: API, UI, Integration & Performance

PROFESSIONAL EXPERIENCE

QA Automation Engineer

2015 – Present

- MOTIVUS — Enterprise Software Consulting**
 - Lead QA automation strategy for large-scale software systems, **ensuring quality gates** across critical services.
 - Architected and maintained **BDD automation frameworks** using Java, Cucumber, and Selenium, enabling continuous regression testing within CI/CD pipelines managed via **Jenkins**.
 - Designed and executed comprehensive **REST API test suites** for services consuming legacy systems, validating transaction flows including authorization, settlement, and reconciliation.
 - Integrated **AI-driven tools (Cursor, Claude, Codex, Antigravity)** into daily automation workflows, pioneering agentic programming techniques to accelerate test case generation and framework development.
 - Managed test data orchestration leveraging **MongoDB** and validated event-driven architectures through **Kafka** message streams.
 - Performed **load & performance testing** using JMeter to ensure system resilience under peak transaction volumes.
 - Collaborated with cross-functional engineering teams across multiple geographies using Agile/Scrum, contributing to sprint planning, code reviews, and quality retrospectives.
 - Created and executed comprehensive test plans covering **functional, non-functional, regression, and integration** testing scenarios.
 - Built API automation suites using **REST template from Spring Boot**, testing services secured with **OAuth 1.0** authentication protocols.
 - Implemented **Behavior-Driven Development (BDD)** test frameworks using Cucumber with Java, improving test readability and stakeholder communication.
 - Automated landing and login page flows using **Selenium WebDriver** with Java, reducing manual regression effort.
 - Deployed and managed builds through **CI/CD pipelines** using Jenkins, Maven, and JFrog Artifactory with code versioned in GitHub.

Technical Support Engineer

2014 – 2015

- CENACE — Centro Nacional de Control de Energia**
 - Managed Windows Server infrastructure (**W2008-R2 & W2012-R2**) supporting critical national energy control operations.
 - Configured and deployed **CISCO networking equipment** (Catalyst 6500 & 2970s), PoE telephones, and wireless access points.
 - Developed a **web-based autonomous monitoring and temperature control system** for data center facilities, combining hardware and software engineering.
 - Provided tier-2 technical support and managed service desk operations for routing and infrastructure inquiries.

PROJECTS & INNOVATION

IntelicaLabs Controller — Published Android App

Self-taught Android development; designed, built, and published a Bluetooth-enabled robotics controller application on the Google Play Store. Demonstrates full software lifecycle ownership from concept to deployment.

ANDROID JAVA BLUETOOTH PUBLISHED APP

Competitive Robotics

Designed and programmed autonomous robots for regional competitions, combining electronics engineering with embedded software development.

C++ ARDUINO HARDWARE EMBEDDED SYSTEMS

1st Place — 9th Robotics Contest of Mayab (Line Follower Autonomous Robot)

4th Place — 9th Robotics Contest of Mayab (MiniSumo Autonomous Robot)

1st Place — 8th Robotics Contest of Mayab (Line Follower Autonomous Robot)
